AI DISCLOSURE STATEMENT — PARIKSHITH AITHAL K V

Name of Student: Parikshith Aithal K V **Roll Number:** BT2024249
Course / Assignment: DAS732 Data Visualization, Programming Assignment 2 (A2)
Team: Plot Twist

---

1. Data Processing and Python Code Generation

Tool(s) used: ChatGPT / Claude
Specific applications: ☒ Data cleaning, filtering, or restructuring scripts (Pandas / NumPy) ☒ Plot/Chart generation boilerplate (Matplotlib / Seaborn / Plotly)
☒ Statistical calculation code (SciPy / Statsmodels) ☒ Debugging error logs or fixing code syntax
Prompts used and modification level: Used AI to generate boilerplate code for Pandas data restructuring (outer joins for ITU/OWID datasets) and Matplotlib/Seaborn scripts for scalar color mapping and rainfall distribution plots (Figs 18–19, 22–23). All statistical thresholds, data selections, and figure layout decisions were manually defined and heavily modified.

2. Interactive Web Dashboards (JavaScript)

Tool(s) used: ChatGPT / Claude / GitHub Copilot
Specific applications: ☐ None ☒ DOM manipulation and HTML/CSS boilerplate setup ☒ D3.js or Chart.js data binding and scales setup
☒ Event listeners (dropdown filters, mouse hover tooltips, click actions) ☒ State management and data reactivity logic
Description of AI involvement: AI was used to draft D3.js boilerplate code for parallel coordinates bundling (centroid attractor splines) and network graph layouts (Spring, Spectral, Circular). Manual code adjustments were made to fit the dataset schemas and interactive filtering controls.

3. Visual Analytics Intelligence Tooling (Tableau)

Tool(s) used: None
Specific applications: ☒ None

4. Report Writing, Data Analysis, and Documentation

Tool(s) used: ChatGPT / Claude / Grammarly
Specific applications: ☐ None ☒ Proofreading, tone refinement, and formatting text ☒ Generating inline JSDoc or Python docstrings / comments
Description of AI involvement: AI was used strictly for proofreading and copyediting the report text written for sections III and VI. All analytical takeaways and interpretations represent original team conclusions.

5. Academic Integrity and Verification

Core logic and authorship statement: I certify that the questions for my task set, the choice of visualizations to keep and discard, and the interpretation of every figure in my set were decided

and verified by me. The analysis and conclusions reflect my own understanding, and I can explain every figure and inference in my section without assistance. AI tools were used solely for code boilerplate and text proofreading as disclosed above.

AI DISCLOSURE STATEMENT — SINDHOOR GANAPATHI HEGDE

Name of Student: Sindhoor Ganapathi Hegde **Roll Number:** BT2024014
Course / Assignment: DAS732 Data Visualization, Programming Assignment 2 (A2)
Team: Plot Twist

---

1. Data Processing and Python Code Generation

Tool(s) used: ChatGPT / Claude / GitHub Copilot
Specific applications: ☒ Data cleaning, filtering, or restructuring scripts (Pandas / NumPy) ☒ Plot/Chart generation boilerplate (Matplotlib / Seaborn / Plotly)
☒ Statistical calculation code (SciPy / Statsmodels) ☒ Debugging error logs or fixing code syntax
Prompts used and modification level: Utilized AI to write and debug algorithmic implementation code for the custom 16-case Marching Squares contour tracer and gridMET spatial data parsing loops. Generated Python/Matplotlib boilerplate for ridgeline and horizon plot transformations (Figs 14–17, 20–21). All algorithmic logic, index checks, and spatial weighting rules were manually verified and refined.

2. Interactive Web Dashboards (JavaScript)

Tool(s) used: None
Specific applications: ☒ None

3. Visual Analytics Intelligence Tooling (Tableau)

Tool(s) used: None
Specific applications: ☒ None

4. Report Writing, Data Analysis, and Documentation

Tool(s) used: ChatGPT / Claude / Grammarly
Specific applications: ☐ None ☒ Proofreading, tone refinement, and formatting text ☒ Generating inline JSDoc or Python docstrings / comments
Description of AI involvement: AI assisted with debugging code docstrings, generating inline comments for the Marching Squares module, and light grammar polish on the text descriptions for Sections V and VII. All conceptual explanations and data insights are entirely our own.

5. Academic Integrity and Verification

Core logic and authorship statement: I certify that the questions for my task set, the choice of visualizations to keep and discard, and the interpretation of every figure in my set were decided and verified by me. The analysis and conclusions reflect my own understanding, and I can explain every figure and inference in my section without assistance. AI tools were used for code and report drafting as disclosed above.

AI DISCLOSURE STATEMENT — VARSHITH M GOWDA

Name of Student: Varshith M Gowda **Roll Number:** BT2024227
Course / Assignment: DAS732 Data Visualization, Programming Assignment 2 (A2)
Team: Plot Twist

---

1. Data Processing and Python Code Generation

Tool(s) used: ChatGPT / Claude / GitHub Copilot
Specific applications: ☒ Data cleaning, filtering, or restructuring scripts (Pandas / NumPy) ☒ Plot/Chart generation boilerplate (Matplotlib / Seaborn / Plotly)
☒ Statistical calculation code (SciPy / Statsmodels) ☒ Debugging error logs or fixing code syntax
Prompts used and modification level: Used AI to generate Python data aggregation scripts for multi-variable correlation matrices and wind rose binned frequency calculations (Figs 8, 27). Helped structure Pandas dataframe queries for cohort tracking (Figs 11–13). Code logic was audited, tested, and modified manually.

2. Interactive Web Dashboards (JavaScript)

Tool(s) used: ChatGPT / Claude / GitHub Copilot
Specific applications: ☐ None ☒ DOM manipulation and HTML/CSS boilerplate setup ☒ D3.js or Chart.js data binding and scales setup
☒ Event listeners (dropdown filters, mouse hover tooltips, click actions) ☒ State management and data reactivity logic
Description of AI involvement: Utilized AI to scaffold D3.js treemap partitioning logic (squarified layout algorithms, zoom behaviors, and breadcrumb state updates for Figs 9–10). Manual adjustments were made to handle data bindings and layout proportions.

3. Visual Analytics Intelligence Tooling (Tableau)

Tool(s) used: None
Specific applications: ☒ None

4. Report Writing, Data Analysis, and Documentation

Tool(s) used: ChatGPT / Claude / Grammarly
Specific applications: ☐ None ☒ Proofreading, tone refinement, and formatting text
Description of AI involvement: AI was used exclusively for copyediting and syntax polishing of draft text describing the treemap interactions and weather co-occurrence findings. No AI-generated text was used without human review and conceptual ownership.

5. Academic Integrity and Verification

Core logic and authorship statement: I certify that the questions for my task set, the choice of visualizations to keep and discard, and the interpretation of every figure in my set were decided and verified by me. The analysis and conclusions reflect my own understanding, and I can explain every figure and inference in my section without assistance. AI tools were used for code and report drafting as disclosed above.
